bioten Hyaluronic 3D launch in N. Macedonia

Discover the triple action of Hyaluronic with one touch! Bioten leads the new HYALURONIC 3D face care line, based on a triple system of hyaluronic acid that has a powerful effect on wrinkles and instantly provides effective skin hydration.

Our skin has the ability to retain moisture that provides a youthful appearance and firmness mostly due to the presence of molecular hyaluronic acids. Acting like magnets, these molecules can hold up to 1000 times their weight in water, providing hydration and volume to the skin. Over the years, the quality and ability of hyaluronic molecules to retain moisture decreases, resulting in decreased skin hydration and the formation of wrinkles.

For the first time on the market, Bioten presents the technology of the triple hyaluronic acid system, consisting of 2 types of hyaluronic acid and a natural stimulator of the already existing hyaluronic acid in the skin, which ensures top hydration and correction of wrinkles:

Hyaluronic acid filler: acts as a topical dermal filler and smoothes the skin surface immediately after application.

Low molecular weight hyaluronic acid: penetrates even the deepest layers of the epidermis and helps to visually reduce small lines and wrinkles by improving skin elasticity for a healthier, younger and brighter skin.

Hyaluronic Acid Stimulator: helps restore the optimal level of hyaluronic acid by stimulating its natural synthesis and recovery, providing intense hydration, skin resistance, firmness and wrinkle reduction.
